

EN.605.256 • JOHNS HOPKINS UNIVERSITY

Abdul Sarwar

Graduate Student in Artificial Intelligence

I am a graduate student in Artificial Intelligence at Johns Hopkins University with interests in machine learning, mathematics, and software development. I enjoy understanding both the theoretical ideas behind intelligent systems and the practical work involved in turning those ideas into reliable software.

My current focus is on strengthening my foundations in Python, algorithms, machine learning, and software engineering while building projects that apply those skills in practice. I am especially interested in problems that combine mathematical reasoning with computation and in developing software that is clear, maintainable, and useful.

This website serves as a growing portfolio of my work in EN.605.256 and future technical projects. As I continue my graduate studies, I plan to use it to document my progress and showcase increasingly advanced work in artificial intelligence and software development.

PORTFOLIO

Projects

Projects completed as part of my Python and software development coursework.

MODULE 1

Completed

Personal Developer Website

A personal developer portfolio built using Python, Flask, HTML, and CSS for EN.605.256 - Modern Concepts in Python, Fall 2026, Whiting School of Engineering, Johns Hopkins University.

This project demonstrates Flask routing, reusable HTML templates, Flask Blueprints, CSS-based page design, navigation, and Git-based version control.
